14 DAYS IN AI

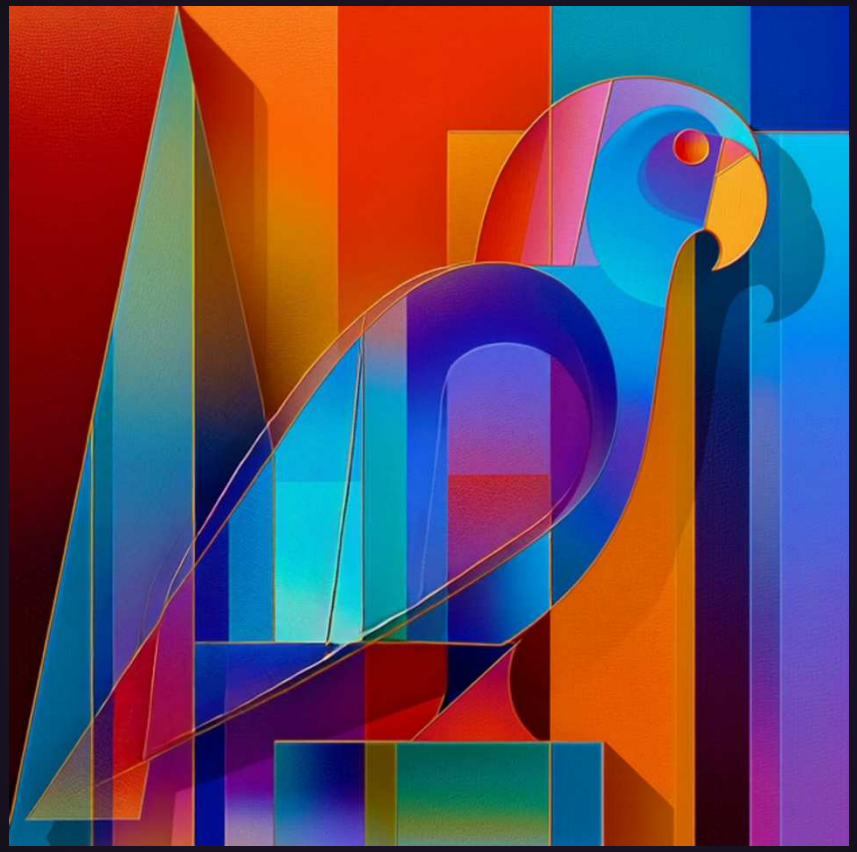

The stack learns to move.

New models got cheaper, open weights got sharper, agent harnesses reached the desktop — and robotics gained a real software stack.

19 confirmed moves

Closed + open weight

Models · tools · silicon · robots

THE RELEASE BOARD

Nineteen moves. One stack.

9

MODELS
Five closed releases; four downloadable open-weight models.

4

HARNESSES
Desktop action, enterprise agents, swarms and orchestration.

3

COMPUTE
New rack, inference GPU and local AI PC categories.

3

ROBOTICS
Physical-AI tooling, video-to-sim-to-real research, and an on-robot foundation model.

Confirmed means the announcement or availability date lands inside Oct 1–14. Future availability is labeled, not counted as shipped.

Agent work becomes the headline.

Long memory, coding throughput and cheaper inference defined the closed-model cycle.

OCT 13	**Google · Gemini 4 Argon** Wide API and product release; flagship positioning for agentic coding.	CLOSED
OCT 12	**Meta · Muse Wonder / Full** Active Memory and Active Focus for long-running agents.	CLOSED
OCT 07	**Anthropic · Claude Haiku 5.5** Low-cost Haiku with new cyber-safety controls.	API

1M

Context appears across the new agentic frontier — but the differentiator is shifting from “how much fits” to “what keeps working.”

READ THE LABEL

Preview is not release.

MISTRAL · OCT 06

Mistral Large 4

Public API preview. Open weights were promised for later in October; license still unconfirmed.

MICROSOFT · OCT 07

MAI-Code-1.1-Flash

Reported local Windows build plus API access. Download and license details remain thin.

REFLECTION · OCT 05

Beam

Unveiled with early access. Weights and technical report were promised later — not shipped in-window.

The new frontier ritual: announce now, open later.

DAY-ONE WEIGHTS

Open models get specific.

ALEPH ALPHA · OCT 03

Kolibri

78.1B / 3.46B-active German–English MoE. Apache 2.0. Up to 1M context.

DEEPSEEK · OCT 06

V4.1 Flash

552B MoE weights, multimodal, 1M context. MIT license.

GOOGLE · OCT 06

EmbeddingGemma 2

740M multimodal embeddings for on-device search and retrieval. Apache 2.0.

JETBRAINS · OCT 08

Mellum2.1

12B / 2.5B-active coding MoE trained for agent loops. Apache 2.0.

MODELS NEED MACHINERY

The harness becomes the product.

OBSERVE

GitHub Copilot computer use

Desktop app control via accessibility trees, with user approval.

COORDINATE

Google Gemini agent

Hours-to-days enterprise agent; private preview and model-agnostic.

SWARM

Ruflo

Open-source meta-harness for Claude Code, Codex and MCP clients.

SCHEDULE

NVIDIA Run:ai

KAI Scheduler, GPU fractioning, Grove and Model Streamer move open.

The model answers. The harness gets work done.

THE HARDWARE LAYER

Compute follows the agent.

INTEL · D270 · OCT 12

Memory-first inference

Up to 480GB LPDDR5X in a 350W air-cooled PCIe card; sampling underway.

AMD · HELION · OCT 12

An agentic AI rack

Open rack blueprint spanning EPYC and MI350P with integrated token routing. GA planned for November.

MICROSOFT + NVIDIA · OCT 07

Builder PCs

Grace + Blackwell Windows systems target local agents. Retail planned for Oct 16.

Specs and performance are vendor-reported. Sampling, preview and future retail are labeled as such.

FROM SIMULATION TO ACTUATION

Robotics gets a software stack.

Three in-window moves connect foundation models, simulation, cloud tooling and real machines.

OCT 07

AWS Physical AI Toolchain

Reference architectures unite NVIDIA simulation and robot models with AWS training, edge and agent services.

PLATFORM

OCT 13

Gemini 4 Argon for Robotics

Google demonstrated video-to-simulation-to-real transfer on Apptronik Apollo and announced a Boston-area robotics lab.

RESEARCH

Video to simulation to real-world behavior: the emerging loop is less about a single robot and more about a reusable learning pipeline.

Longmont AI

NEURA ROBOTICS · OCT 14

Neuron AI stays on the robot.

NEURA Robotics of Metzingen, Germany unveiled a multimodal “Physical AI” foundation model for its humanoid and service robots.

PLA

Perception → language → action

Vision, touch, hearing and memory feed a shared architecture for physical behavior.

MODEL

LOCAL

No cloud round-trip

Inference runs on-robot, keeping perception and action close to the machine.

EDGE

TRAIN

Five robot embodiments

Training spans NEURA Gyms plus human demonstrations captured with data suits.

MULTI-BODY

11:00

Planned live demo: the 4NE1 humanoid performing an 11-minute laundry sequence at NVIDIA GTC Berlin, Oct 20–22 — Station-Berlin, Hall 3, Booth #3031.

Evidence status: company announcement only. No independent evaluations are available yet.

SECONDARY BOARD

More models shipped.

OCT 01

Suno Speech beta

Voice and background music generated as one track.

OCT 01

MAI Transcribe 2 + Voice 2.1

Microsoft speech models entered Azure public preview.

OCT 02

Ai2 AstaBrief 8B

Open scientific-report model with training data.

OCT 06

Nano Banana 2.1

Google image model reached general availability.

OCT 07

Liquid d1

Open decision models for edge devices.

OCT 07–08

GPT-6 + 6.1 Sol tier

Product rollout plus an ultrafast API option.

OCT 13

LFM2.5-24B-A2B

Open-weight 24B / 2B-active agentic model.

BOUNDARY

Nemotron 3.5 Bolt

Scheduled for Oct 15 — outside this deck’s release window.

WHAT CHANGED

Five signals to carry forward.

01

Infrastructure is being rebuilt around agents, not single-turn inference.

02

Local AI is a deployment strategy now, not a novelty demo.

03

“Preview now, weights later” is the new openness fault line.

04

Coding and long-running work are the flagship battleground.

05

Physical AI is maturing through tools, simulation and infrastructure.

THE OPERATING PRINCIPLE

Test the handoff. Verify the result.

A model is one layer. The consequential system is model + memory + tools + compute + approvals + a stop button.

Measure accepted work

Label vendor claims

Keep human control

METHOD

Sources, labels, boundaries.

A curated, date-bounded snapshot. Official sources were preferred; reliable reporting filled gaps. Vendor benchmarks remain vendor claims. Future availability is not treated as shipped.
